ICONIC
BEVERAGES

ICONIC BEVERAGES BRAND GUIDELINES

Foundations · Version 1.0 · November 2026

These are the foundations of the ICONIC identity: our logo, colour and typography, and how they come together.

Use them whenever you make something for ICONIC, whether you sit on the team, at an agency or with one of our partners. If something isn't covered here, talk to the ICONIC team before you start.

This PDF is a static copy of the online guidelines, where you can also download every logo, swatch and font: goodapplesdesign.github.io/iconic-brand-guidelines

LOGO

The founder's ring has been part of ICONIC since day one, and the buyers, venue managers and partners we work with already know it. This evolution keeps that equity and gives it a more confident, premium finish.

A refined ring, a new wordmark and a flexible suite of lockups, so the logo works as hard on a favicon as it does on a bottle neck.

Four lockups cover every placement. Each one is master artwork: never redraw, retype or rearrange its parts.

Lead with the primary stack, and with gold on Noir as the hero version. Move to the wide stack or wordmark when space is horizontal, and to the icon when space is very small.

Every lockup, in every colourway, can be downloaded from the online guidelines.

Primary stack

Truest to the legacy logo, using the full stack of logo elements. Use it as the primary logo wherever possible. Best for larger vertical or square placements.

Wide stack

The horizontal version, using the full stack of logo elements. Best for wide placements such as website headers, email signatures and signage.

Wordmark

Use the standalone wordmark when the ring isn't needed in context. Also suits horizontal placements, and is more compact than the wide stack.

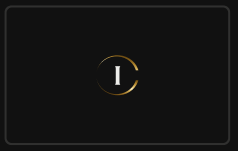

Icon

The most stripped-back version of the logo. Best for very small placements such as favicons and social avatars. Also works as a stamp, pattern or packaging emboss.

CHOOSING A LOCKUP

If you’re unsure, use the primary stack.

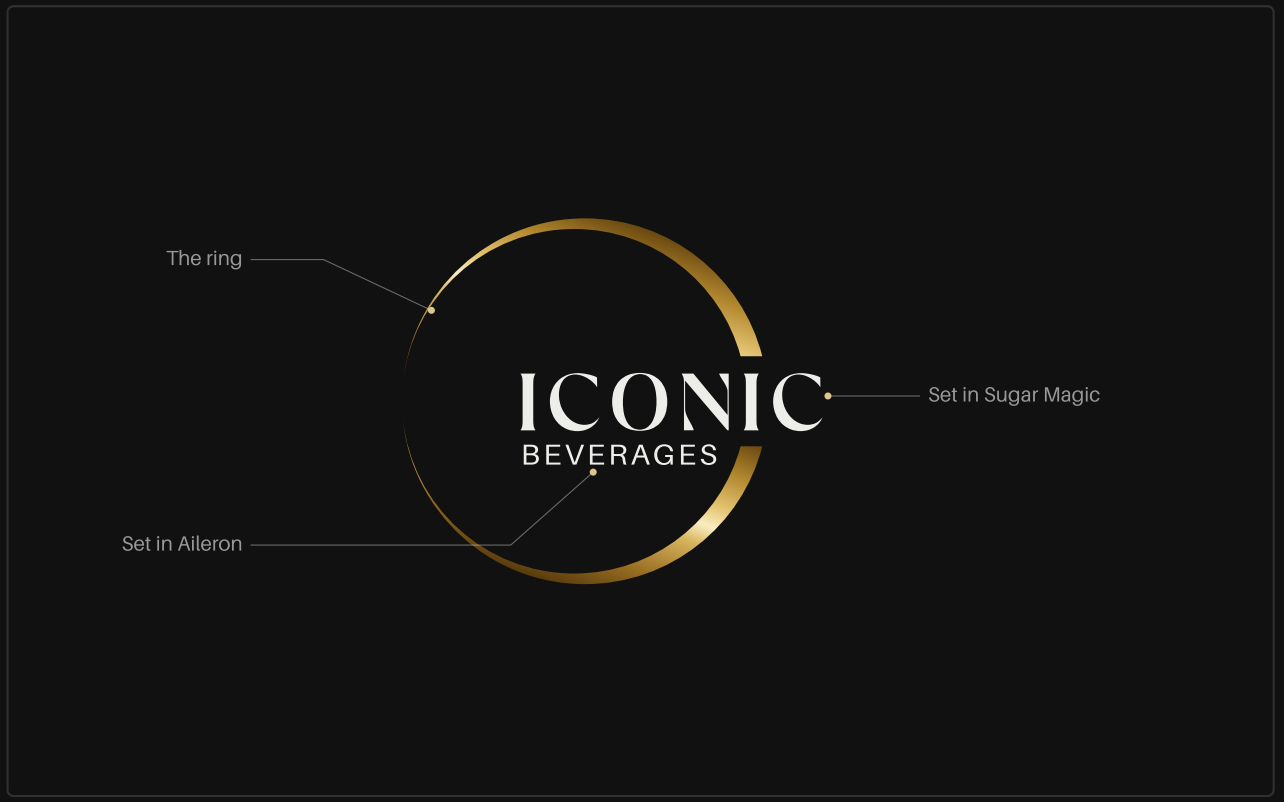

Only step down to a simpler lockup when the space genuinely calls for it.

	The space	Use	For example
	Square, vertical or generous	Primary stack	Presentations, packaging, merchandise, social posts
	Wide and short	Wide stack	Website header, email signature, letterhead, fascia signage
	Wide, and the ring is shown nearby	Wordmark	Footers, documents that already carry the ring
	Very small or square	Icon	Favicon, app and social avatars, wax seal, emboss

ANATOMY

Three elements make up the logo: the ring, the ICONIC wordmark and BEVERAGES.

The ring is the founder's mark, refined with a heavier weight so it holds up at small sizes. It stays open where the wordmark breaks through it. ICONIC is set in Sugar Magic, our display typeface. The spacing between the elements is fixed in the master artwork.

COLOURWAYS

The ring carries the colour.

Each brand background has its own metal (Blanc can take Graphite or Gold), and the wordmark stays Blanc on dark backgrounds and Noir on light ones.

Gold on Noir

The hero logo. Our first choice whenever the background is Noir.

Silver on Graphite

The monochrome pairing for dark surfaces.

Graphite on Blanc

Monochrome, for light backgrounds, with a Noir wordmark.

Gold on Blanc

For light backgrounds, with a Noir wordmark.

Bronze on Brown

The first colour alternate.

Gold on Olive

The second colour alternate.

GRADIENT AND FLAT

Gradient

Our everyday logos for screen and high-quality print. The metal gradient runs through the ring only, never through the wordmark.

Flat

When a gradient can't reproduce (single-colour print, small sizes, embroidery, foil, emboss and deboss), use the flat versions. Gold Lite and Bronze Lite stand in for the metals.

Gradient

Silver, on Graphite

Graphite, on Blanc

Bronze, on Brown

Gold, on Olive

Flat

Blanc, on Graphite

Noir, on Blanc

Bronze Lite, on Brown

Gold Lite, on Olive

ON PHOTOGRAPHY

Use the Blanc logo on dark or busy images and the Noir logo on light, calm ones.

The gold logo can sit on deep, calm shadow. Always place the logo over the quietest part of the frame.

Blanc, on a dark image

Noir, on a light image

CLEARSPACE

Keep the area around the logo clear of text, graphics and edges, so the logo always reads on its own.

The logo measures itself. **X** is the height of the O in ICONIC. Leave at least two O's (2X) of clear space on every side of the primary stack, wide stack and wordmark, and one (X) around the icon.

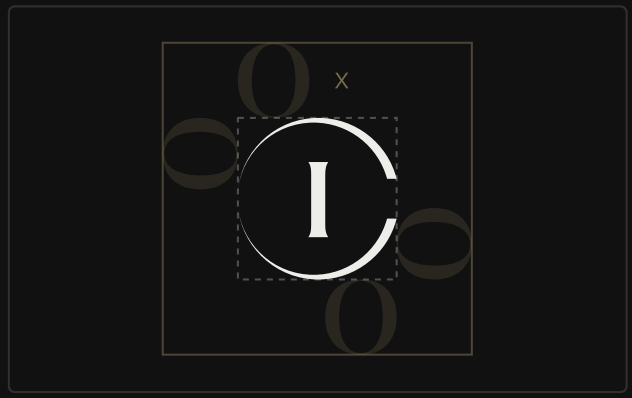

Primary stack: 2X

Wide stack: 2X

Wordmark: 2X

Icon: X

MINIMUM SIZE

Don’t reproduce the logo smaller than these widths, or BEVERAGES stops being legible.

When space is tighter, switch to a simpler lockup rather than shrinking.

Printed at 100%, the logos on this page are shown at their minimum print size.

Primary stack

30 mm in print
120 px on screen

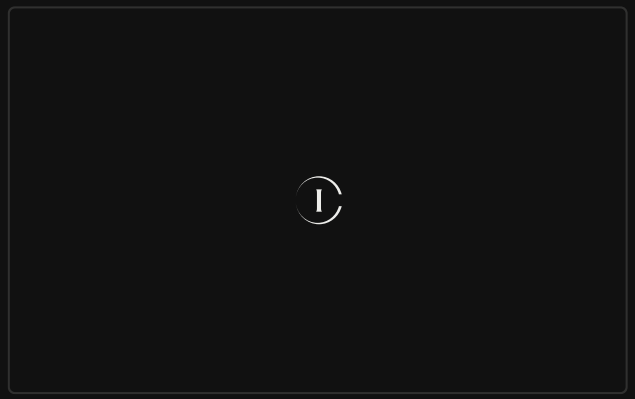

Wide stack

35 mm in print
140 px on screen

Wordmark

25 mm in print
100 px on screen

Icon

6 mm in print
24 px on screen (16 px as a favicon)

THE ANIMATED AURA

For hero moments, the gold ring catches two warm lights.

Locked opposite each other, they sweep round the ring together and the gold follows, with a soft glow behind and a fine glisten along the edge. The logo itself moves only with a slow, slight push-in.

Keep it for large, high-impact placements on Noir: screens, video, events and launches. Never use it at small sizes or on photography, and never apply other effects to the logo.

Still from the animation

Gold on Noir

1920 × 1080, 10-second seamless loop. MP4.

CO-BRANDING

When ICONIC appears alongside the brands we represent, or with a venue or event partner, both logos should feel like equals.

Match the ICONIC lockup to the shape of the partner logo, use it in Blanc or Noir at the same optical size, and separate the two with a thin vertical rule. Keep X of clear space on either side of the rule.

Primary stack, with a badge

Square and round partner marks pair with the primary stack.

Wordmark, with a wordmark

Type-only partner logos pair with our wordmark.

Wide stack, with a horizontal logo

Horizontal partner lockups pair with the wide stack.

Icon, with a symbol

When the partner uses a symbol on its own, use our icon.

INCORRECT USAGE

Consistency builds recognition. Always use the master artwork as supplied, and avoid the following.

Artwork

Never alter the logo itself.

✕ **Don't** stretch or squash the logo

✕ **Don't** rotate or angle the logo

✕ **Don't** recolour it outside the palette

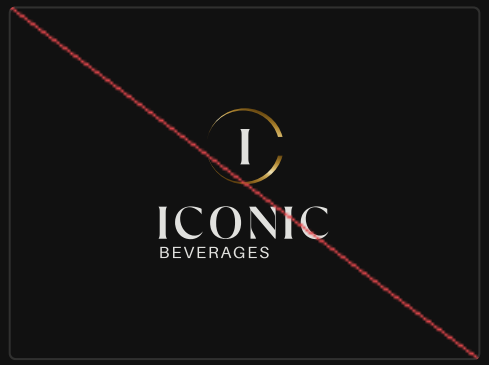

✕ **Don't** outline the logo

✕ **Don't** add shadows, glows or effects

✕ **Don't** use low-contrast pairings

✕ **Don't** rearrange or rebuild the lockups

✕ **Don't** retype the wordmark in another font

INCORRECT USAGE

Application

Choose the right colourway and lockup for the background and the space.

✕ **Don't** use the Blanc logo on a light image

✕ **Don't** use the Noir logo on a dark image

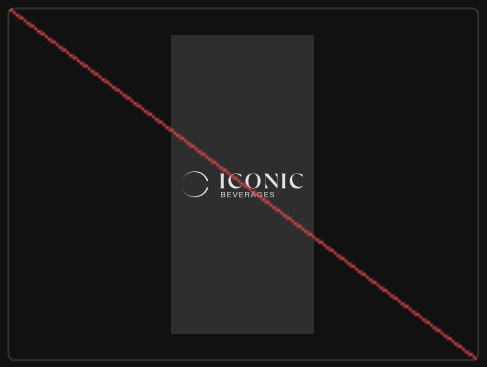

✕ **Don't** use the metallic logos on mid-tones or busy colours

✕ **Don't** drop the logo over busy detail

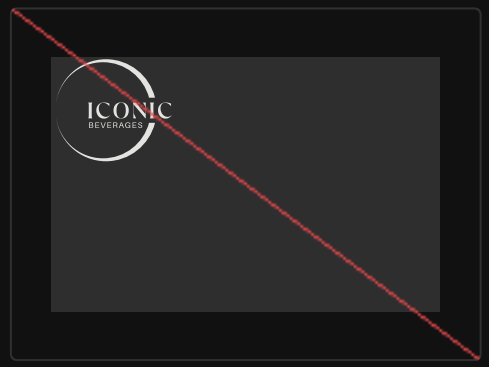

✕ **Don't** box the logo in a panel to force contrast

✕ **Don't** squeeze the wide stack into a narrow space. Use the primary stack.

✕ **Don't** use the primary stack in a short banner. Use the wide stack.

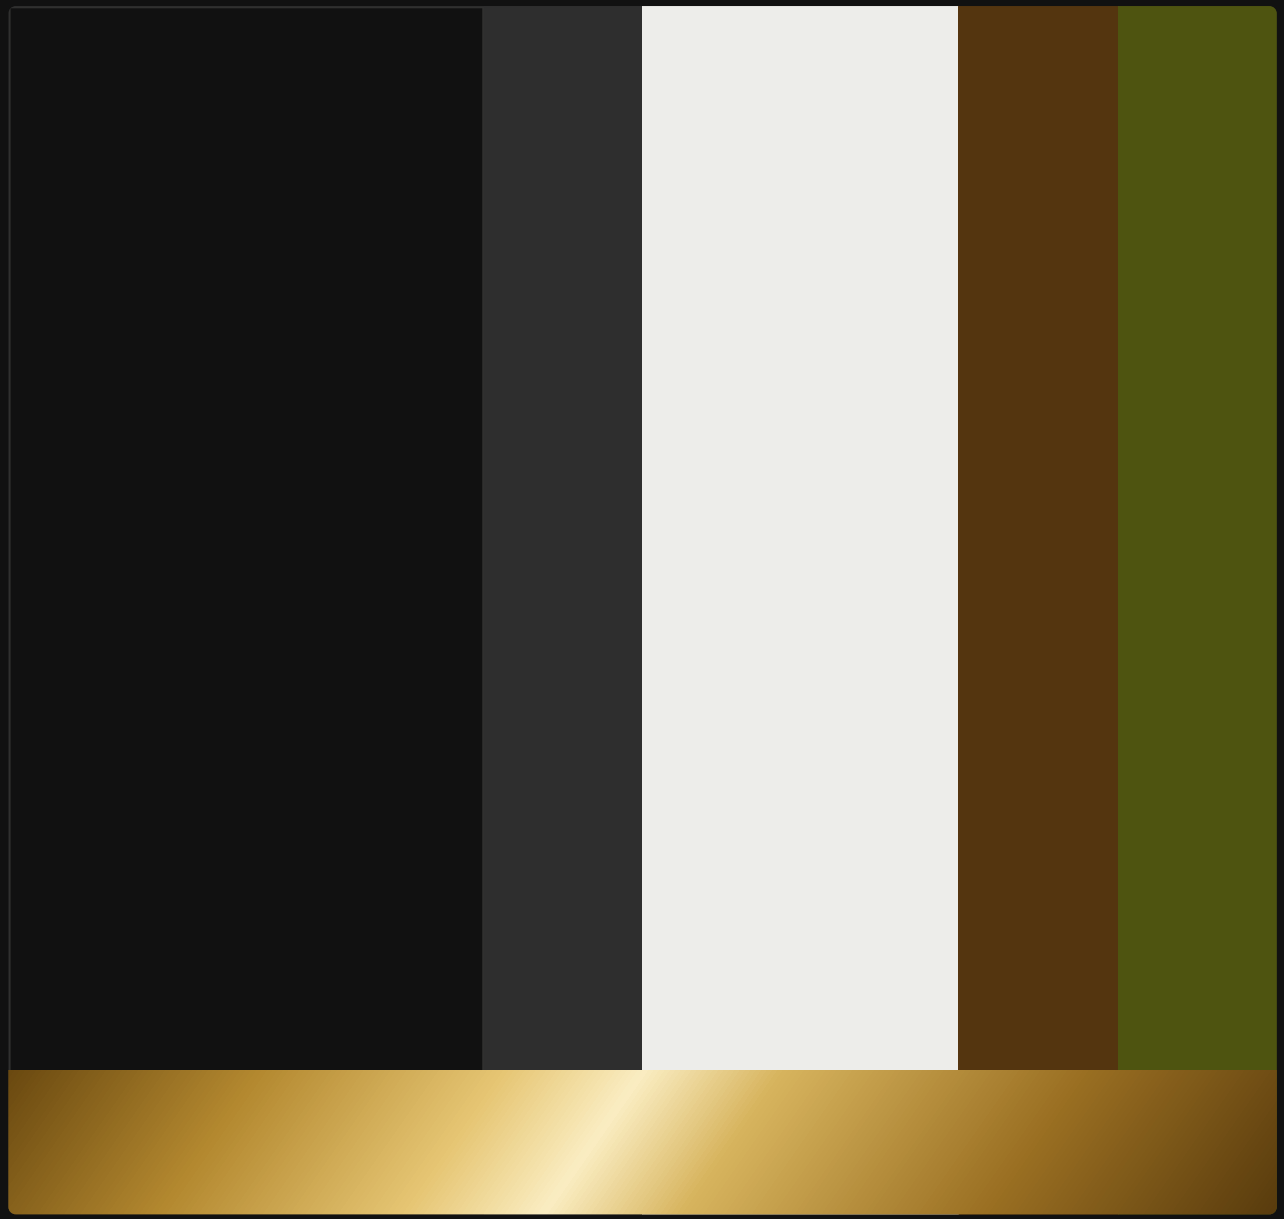

✕ **Don't** crowd the logo against edges. Leave 2X clear.

02

COLOUR

Monochrome is the foundation. Noir and Blanc carry the identity, with Graphite as a supporting neutral.

Two richer alternates, Brown and Olive, are feature backgrounds, each paired with its own metal. Silver, Bronze and Gold run through the ring as gradients, with flat Bronze Lite and Gold Lite for print and small sizes.

MONOCHROME

Most of what we make should be Noir and Blanc. The contrast is confident and timeless, and it lets the metals do the talking.

Graphite is the supporting neutral, for secondary surfaces, cards and dividers.

Noir

Dark text and backgrounds

HEX	#111111
RGB	17 17 17
CMYK	73 67 66 83
Pantone	Neutral Black C

Graphite

Supporting neutral

HEX	#2E2E2E
RGB	46 46 46
CMYK	70 64 63 63
Pantone	Black 7 C

Blanc

Light text and backgrounds

HEX	#EDEDEA
RGB	237 237 234
CMYK	6 4 6 0
Pantone	Cool Gray 1 C

COLOUR ALTERNATES

Brown and Olive add warmth and richness alongside monochrome. Use them as feature backgrounds, each paired with its own metal: Bronze on Brown, Gold on Olive.

Brown is a rich, bronze-toned brown. Olive is a true, distinct olive, never muted or dull. Use one alternate at a time, and never set them against each other.

Brown

Feature background, paired with Bronze

HEX	#54350F
RGB	84 53 15
CMYK	46 67 96 55
Pantone	161 C

Olive

Feature background, paired with Gold

HEX	#4E5410
RGB	78 84 16
CMYK	63 47 100 39
Pantone	2308 C

METALS

Silver, Bronze and Gold share one gradient structure: a soft highlight, a deeper shadow and smooth transitions, so the three read as a set.

A Graphite gradient carries the ring on Blanc.

The gradients belong to the ring. Use them for the logo and for small accents such as rules and icons, never as large fills or behind text.

Gold

0%	18%	36%	46%	56%	78%	100%
#6A4910	#B3882F	#E6C674	#FAEDC2	#D7B45E	#9A6F22	#56390C

#1C1C1C	#3A3A3A	#5E5E5E	#7C7C7C	#4C4C4C	#2E2E2E	#151515

GRADIENT SETTINGS AND LITES

Gradient settings

All four metals use the same stops, so they can be swapped for one another. In Illustrator, apply them as linear gradients at −55°. On screen, use the CSS equivalent.

Type	Linear
Stops	0, 18, 36, 46, 56, 78, 100%
Angle	−55° in Illustrator, 125deg in CSS
Illustrator swatches	V3 Gold, V3 Bronze, V3 Silver, V3 Graphite

Lites

Flat stand-ins for the metals, for single-colour print, small sizes, foil and emboss references, and type accents.

Bronze Lite

Flat accent

HEX	#B4885A
RGB	180 136 90
CMYK	28 45 72 6
Pantone	2317 C

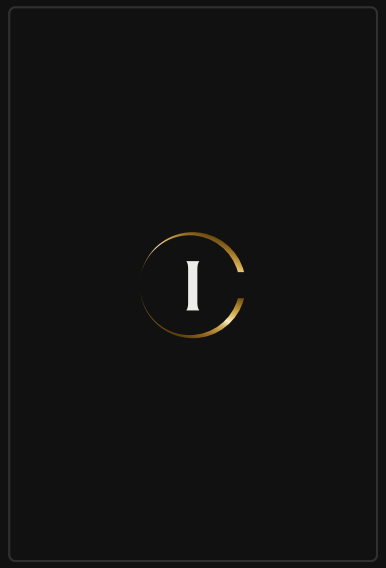

Gold Lite

Flat accent

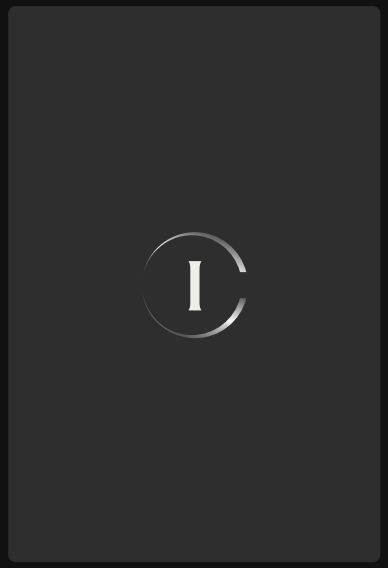

HEX	#DDC68C
RGB	221 198 140
CMYK	14 19 52 0
Pantone	3599 C

PAIRINGS

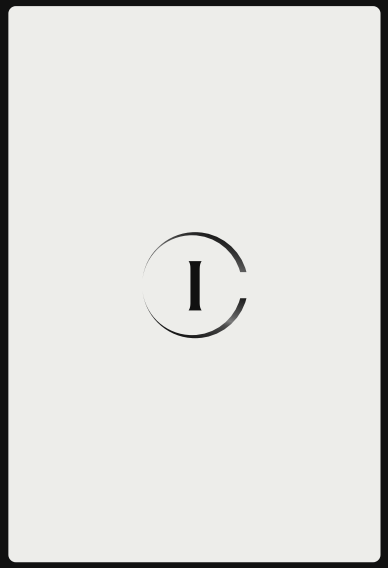

Every background has a set wordmark colour and a set metal. Stick to these pairings and our materials will always look like one family.

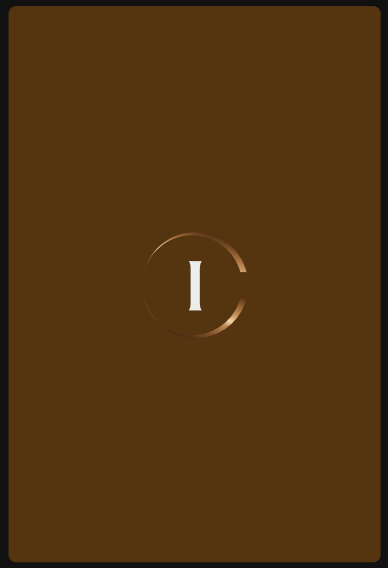

Noir + Gold
The hero pairing. Blanc type.

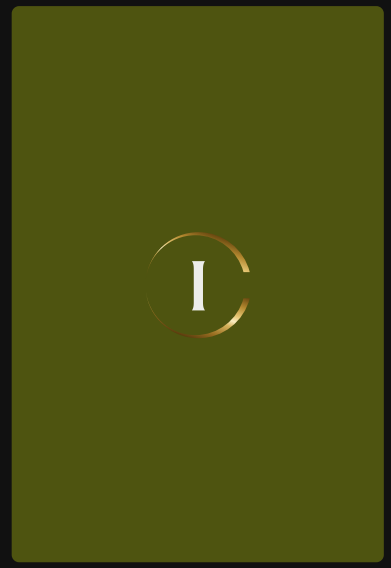

Graphite + Silver
Monochrome, for dark surfaces. Blanc type.

Blanc + Graphite
Monochrome, for light surfaces. Noir type.

Brown + Bronze
The first alternate. Blanc type.

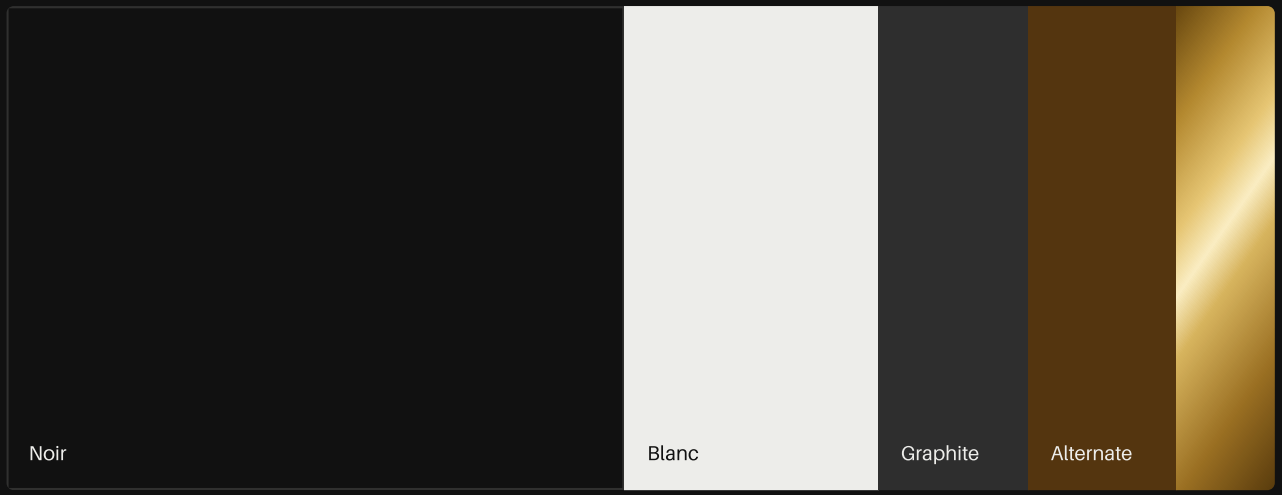

Olive + Gold
The second alternate. Blanc type.

BALANCE

Lead with monochrome. Bring in one alternate for feature moments, and keep the metals to accents.

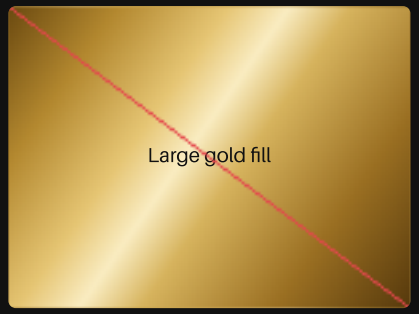

The bar shows the rough proportions across a typical set of materials, not a rule for every single layout.

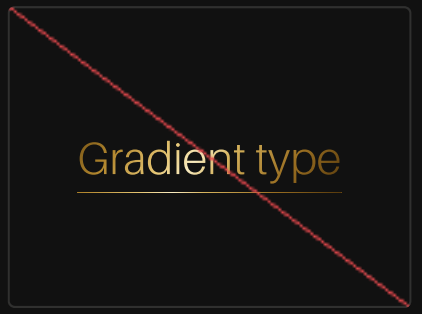

Noir 55 · Blanc 20 · Graphite 10 · one alternate 10 · metals 5

INCORRECT USAGE

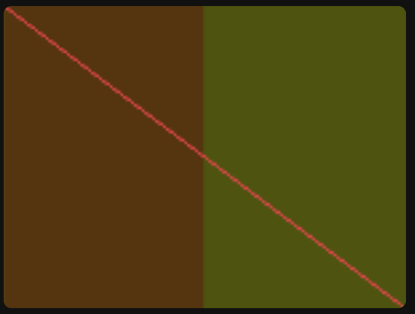

Keep the palette tight. Avoid these.

✕ **Don't** use the metal gradients as backgrounds or large fills

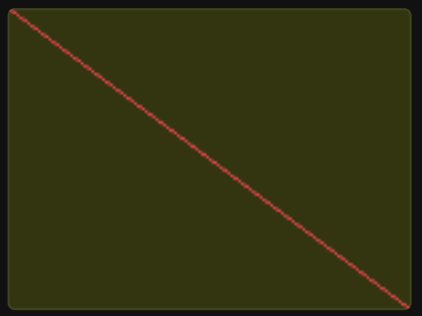

✕ **Don't** set text in a gradient

✕ **Don't** put Brown and Olive side by side

✕ **Don't** introduce colours outside the palette, red included

✕ **Don't** use tints or transparencies of the alternates

✕ **Don't** set body copy in low-contrast pairings

TYPOGRAPHY

Two typefaces carry the brand. Sugar Magic is our display serif: refined contrast with timeless elegance, and the voice of the wordmark.

Aileron does the everyday work. It is clean, modern and easy to read at any size, so the display type always has room to stand out.

SUGAR MAGIC

Sugar Magic Serif Medium sits in the sweet spot between a sophisticated editorial serif and a more modern finish. It is the typeface of the ICONIC wordmark.

It's a commercial font, so each team using it needs its own licence.

Use it for page titles, headings and short statements, always in capitals: +60 tracking at display sizes and +100 for headings. Never set it in lowercase, and never use it for body copy.

PROPOSED BRAND SUITE

AILERON

Aileron is a clean sans serif by Sora Sagano, free for anyone to use. We use it for body copy, subheadings, labels, captions and interfaces.

Light is our default for body copy and large text, Regular for subheadings and labels. SemiBold is for emphasis only.

Download Aileron ↗

Aileron Light

Aa Gg Rr

Aa

Light

Body copy, intros, large text

Aa

Regular

Subheadings, labels, navigation

Aa

SemiBold

Emphasis within copy

Aa

Bold

Use sparingly, for data and pricing

HIERARCHY

A simple scale keeps layouts calm and easy to scan. One display moment per layout, then let Aileron carry the rest.

Sizes are for screen. For print, keep the ratios and set body copy at 9 to 11 pt.

Display	EVOLUTION	Sugar Magic, capitals 56 / 62 px, tracking +60
Heading	PROPOSED LOGO SUITE	Sugar Magic, capitals 22 / 27 px, tracking +100
Subheading	Premium spirits, independently distributed.	Aileron Regular 20 / 28 px, tracking 0
Body	We work with the buyers, venue managers and partners who shape what Australia drinks. Body copy is set in Aileron Light, sentence case, left aligned.	Aileron Light 16 / 26 px, tracking 0
Label	Gold, on Noir	Aileron Regular, sentence case 14 / 20 px, tracking 0
Caption	Captions and footnotes sit in a muted tone.	Aileron Light 13 / 19 px, tracking 0

TYPESETTING

A few habits keep our type looking considered.

Alignment

Set copy left aligned and ragged right. Centre only short, single-line statements. Never justify.

Case

Capitals belong to Sugar Magic alone. Aileron is always set in sentence case, labels and buttons included.

Measure

Keep lines between 45 and 75 characters. Shorter for intros, never edge to edge.

Leading

About 1.1 for display, 1.2 for headings and 1.5 to 1.6 for body copy.

Tracking

Track Sugar Magic at +100, or +60 at display sizes. Leave Aileron at 0.

Colour

Blanc or Noir for copy. Gold Lite for the odd label or accent, never for paragraphs.

FALLBACK FONTS

Some tools can’t load our fonts. Use these stand-ins so documents still feel like ICONIC.

The wordmark is always placed as artwork, never typed, so it is unaffected.

Where	Instead of Sugar Magic	Instead of Aileron
Google Slides and Docs	Gilda Display	Roboto (Light for body)
Microsoft Office	Georgia	Arial
Email and signatures	Georgia	Arial

INCORRECT USAGE

Avoid these.

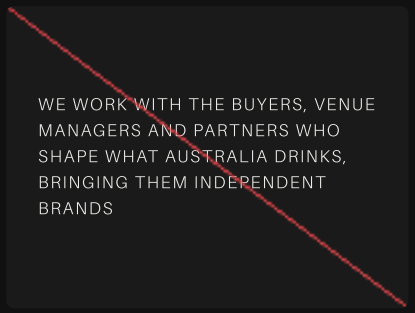

✕ **Don't** set Sugar Magic in lowercase or use it for body copy

✕ **Don't** track out lowercase type

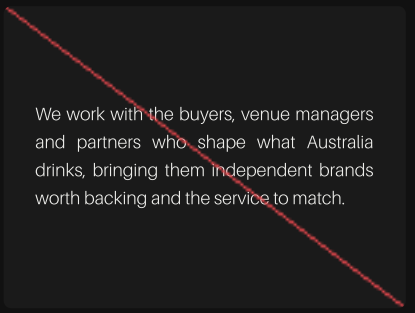

✕ **Don't** stretch, condense or skew type

✕ **Don't** set Aileron in capitals

✕ **Don't** introduce other typefaces, script fonts included

✕ **Don't** justify text

DOWNLOADS

Master artwork, swatches and fonts are in the online guidelines.

Use SVG logos for screen and PNG where SVG isn't supported.

Pantone references are the closest PANTONE+ Solid Coated matches, measured in Delta E 2000. CMYK values are converted for coated stock. Proof both on press.
